

OSTATI UNIVERSAL®

Information about product:

OSTATI UNIVERSAL CEM II 42,5 N is fast hardening Portland cement of 42.5 strength class with the content of natural additives from 6% to 20%.

Product use:

- Production of high strength and durable concrete (B25 class and higher)
- Construction of heavy foundations and solid constructions of outer walls
- Floor cement screed, rough leveling of floor
- Mortars for masonry construction.
- Wide range of finishing works
- Production of small piecework (slab, curb and so on) as well as individual designer's works from concrete (furniture and decoration elements)
- The high early strength enables to reduce the formwork removal term, increase the formwork turnover when making piecework, reduce construction terms without quality loss
- Decrease of cement consumption on 1 cum concrete mixture

Product advantages:

- High early compression breaking strength (20-22 MPA in 2 days that is by 10-12 MPA more than the necessary minimum set out by the early strengthening cement standard of the given class)
- High final compression breaking strength on the 28th day that exceeds the standard set out for 42,5 class cement by several MPA
- Convenience in working with mortar due to the high adhesive effect and homogeneity.
- Improved convenient laying ability and maintenance of properties in time
- Easy distribution of mortar all over the formwork
- High adhesion with surfaces in finishing
